PROFESSIONAL SUMMARY

Software Developer with experience in ERP application development, SQL Server database work, business-process customization, and web development. Currently developing and maintaining ERP screens, business logic, and data-driven workflows in the IAS Canias environment using Troia and SQL. Previously worked with SQL Server and T-SQL to build and maintain views, stored procedures, and scripts supporting finance, logistics, and production processes. Builds web applications with C#, ASP.NET Core MVC, React, JavaScript, and Node.js, with a practical understanding of business requirements, data integrity, application maintenance, and problem solving.

TECHNICAL SKILLS

Programming & Web: C#, .NET, ASP.NET Core MVC, JavaScript, React, Node.js, HTML5, CSS3, Bootstrap

Databases: Microsoft SQL Server (MSSQL), T-SQL, SQL queries, views, stored procedures, database design fundamentals, data integrity

Enterprise Applications: IAS Canias ERP, Troia, Netsis ERP, Microsoft Dynamics 365 CRM, business logic, ERP customization

Development Practices & Tools: Git, GitHub, responsive design, debugging, application maintenance, requirements analysis

Data Analysis: Python, XGBoost, K-Means, feature engineering

PROFESSIONAL EXPERIENCE

Software Developer | IAS Software Company

Mar 2026 – Present | IAS İzmir Plant, Aegean Free Zone (ESBAS), İzmir, Türkiye

- Develop and customize ERP applications in the IAS Canias environment using the Troia programming language.
- Implement and maintain application screens, business logic, and process-oriented functionality based on business requirements.
- Use SQL to query, manipulate, and report business data across ERP workflows.
- Support ongoing application improvements by investigating requirements and refining existing ERP functionality.

ERP Software Specialist | Planet Software Company

Jun 2024 – Feb 2026 | İzmir, Türkiye

- Managed and optimized Netsis ERP data in Microsoft SQL Server, with attention to data integrity and query performance.
- Developed and maintained T-SQL views, stored procedures, and scripts supporting finance, logistics, and production modules.
- Worked with business data and ERP workflows to investigate issues, support reporting needs, and improve data handling.

CRM Consultant | Parge Software Consulting A.Ş.

Dec 2022 – Nov 2023 | İstanbul, Türkiye

- Customized Microsoft Dynamics 365 CRM modules, forms, and business process flows in test and live environments.
- Supported client-specific business process requirements for organizations including Borusan Holding, Tatko, and ÇYDD.

Software Engineer Intern | S4IN Software Company

Jul 2021 – Aug 2021 | İzmir, Türkiye

- Supported internal web interface development using HTML, CSS, and JavaScript.
- Contributed to responsive layout improvements and user-interface refinements.

Software Engineer Intern | Sisbim Software Company

Jul 2020 – Aug 2020 | İzmir, Türkiye

- Assisted in building customer-facing web pages based on design requirements.
- Contributed to page layout adjustments and JavaScript form validation.

PROJECTS

■ Migros-Inspired Online Grocery Web App

Tech stack: React, Node.js

Built a Migros-inspired online grocery application featuring product search, favorites, and a live-updating shopping cart.

GitHub: https://github.com/ipekgozlek/migros-backend | Live Demo: https://migros-shop.vercel.app/

■ ASP.NET Core MVC Portfolio Website

Tech stack: C#, .NET 10, ASP.NET Core MVC, SQL Server

Developing a database-backed portfolio application with an administrative area for managing portfolio content and messages.

GitHub: https://github.com/ipekgozlek/MyPortfolio

■ Responsive Product Carousel (Trendyol-inspired)

Tech stack: HTML5, CSS3, JavaScript, Bootstrap 5, Local Storage API, Swiper.js

Built a responsive product carousel with sliding animations, local product-data persistence, add-to-cart functionality, price rendering, and DOM manipulation.

Live Demo: https://ipekgozlek.github.io/urunkart_Swiperjs/

■ C# — 25 Practical Projects

Tech stack: C#

Completed a hands-on C# learning course focused on building 25 practical projects.

GitHub: https://github.com/ipekgozlek/CSharp-25-Projects

■ Promotion Impact & Cannibalization Analysis

Tech stack: Python, XGBoost, K-Means, Feature Engineering

Built a predictive model using product-level features (PrePromoAvg, ProductGroup1/2), achieving $R^2 = 0.72$ and Adjusted MAPE = 87%; identified within-group and cross-group cannibalization and segmented stores using K-Means.
